

Dosing Guideline JSON Help

This archive contains structured data representations for each dosing guideline annotated by PharmGKB. Each file is one guideline in JSON format. Each file is named for the guideline it contains.

If you would like to implement functionality similar to PharmGKB's genotype drop-down boxes found on the CPIC-guideline-annotation webpages, CPIC and PharmGKB recommend using CPIC source data directly, including the CPIC guidelines and CPIC supplemental resources. Guidelines and supplemental resources are available on the [CPIC website](#) and each guideline page links to all the files containing all of the information that is required to replicate the behavior seen on PharmGKB.

While the information is available in PharmGKB guideline JSON files, the possibility exists that changes have been introduced or the material could be out-of-date with the CPIC guideline content. Information in the JSON files should be internally reviewed if used instead of pulling directly from CPIC resources.

The JSON guideline annotation schema is documented on the [PharmGKB API server - api.pharmgkb.org](#).
